Mathematical modelling is a subject without boundaries. It is the means by which mathematics becomes useful to virtually any subject. Moreover, modelling has been and continues to be a driving force for the development of mathematics itself. This book explains the process of modelling real situations to obtain mathematical problems that can be analyzed, thus solving the original problem.

The presentation is in the form of case studies, which are developed much as they would be in true applications. In many cases, an initial model is created, then modified along the way. Some cases are familiar, such as the evaluation of an annuity. Others are unique, such as the fascinating situation in which an engineer, armed only with a slide rule, had 24 hours to compute whether a valve would hold when a temporary rock plug was removed from a water tunnel.

Each chapter ends with a set of exercises and some suggestions for class projects. Some projects are extensive, as with the explorations of the predator-prey model; others are more modest.

The text was designed to be suitable for a one-term course for advanced undergraduates. The selection of topics and the style of exposition reflect this choice. The authors have also succeeded in demonstrating just how enjoyable the subject can be.

This is an ideal text for classes on modelling. It can also be used in seminars or as preparation for mathematical modelling competitions.

From reader reviews:

Diana Ham:

This Mathematical Modelling: A case studies approach (Student Mathematical Library) are generally reliable for you who want to certainly be a successful person, why. The reason of this Mathematical Modelling: A case studies approach (Student Mathematical Library) can be one of the great books you must have is usually giving you more than just simple examining food but feed you actually with information that possibly will shock your previous knowledge. This book will be handy, you can bring it all over the place and whenever your conditions in e-book and printed versions. Beside that this Mathematical Modelling: A case studies approach (Student Mathematical Library) giving you an enormous of experience for example rich vocabulary, giving you demo of critical thinking that we all know it useful in your day action. So , let's have it appreciate reading.

Joseph Thomas:

Reading a e-book tends to be new life style within this era globalization. With studying you can get a lot of information that can give you benefit in your life. Along with book everyone in this world can easily share their idea. Books can also inspire a lot of people. Lots of author can inspire their own reader with their story or maybe their experience. Not only the storyplot that share in the books. But also they write about the data about something that you need example. How to get the good score toefl, or how to teach your kids, there are many kinds of book which exist now. The authors nowadays always try to improve their talent in writing, they also doing some exploration before they write with their book. One of them is this Mathematical Modelling: A case studies approach (Student Mathematical Library).

Jessica Bradburn:

You can get this Mathematical Modelling: A case studies approach (Student Mathematical Library) by look at the bookstore or Mall. Merely viewing or reviewing it could possibly to be your solve trouble if you get difficulties on your knowledge. Kinds of this e-book are various. Not only by means of written or printed but in addition can you enjoy this book through e-book. In the modern era similar to now, you just looking by your local mobile phone and searching what their problem. Right now, choose your personal ways to get more information about your e-book. It is most important to arrange you to ultimately make your knowledge are still change. Let's try to choose proper ways for you.

Frank Arnett:

That guide can make you to feel relax. This kind of book Mathematical Modelling: A case studies approach (Student Mathematical Library) was bright colored and of course has pictures around. As we know that book Mathematical Modelling: A case studies approach (Student Mathematical Library) has many kinds or genre. Start from kids until young adults. For example Naruto or Investigator Conan you can read and feel that you are the character on there. So , not at all of book are make you bored, any it can make you feel happy, fun

and unwind. Try to choose the best book to suit your needs and try to like reading that will.
