## **Stock Identification Methods: Applications in Fishery Science**

**Stock Identification Methods** provides a comprehensive review of the various disciplines used to study the population structure of fishery resources. It represents the worldwide experience and perspectives of experts on each method, assembled through a working group of the International Council for the Exploration of the Sea. The book is organized to foster interdisciplinary analyses and conclusions about stock structure, a crucial topic for fishery science and management.

Technological advances have promoted the development of stock identification methods in many directions, resulting in a confusing variety of approaches. Based on central tenets of population biology and management needs, **Stock Identification Methods** offers a unified framework for understanding stock structure by promoting an understanding of the relative merits and sensitivities of each approach.

- \* Describes eighteen distinct approaches to stock identification grouped into sections on life history traits, environmental signals, genetic analyses, and applied marks
- \* Features experts' reviews of benchmark case studies, general protocols, and the strengths and weaknesses of each identification method
- \* Reviews statistical techniques for exploring stock patterns, testing for differences among putative stocks, stock discrimination, and stock composition analysis
- \* Focuses on the challenges of interpreting data and managing mixed-stock fisheries
