Modular System Design and Evaluation (Decision Engineering)

Mark Sh. Levin

Modular System Design and Evaluation (Decision Engineering) Mark Sh. Levin

This book examines seven key combinatorial engineering frameworks (composite schemes consisting of algorithms and/or interactive procedures) for hierarchical modular (composite) systems. These frameworks are based on combinatorial optimization problems (e.g., knapsack problem, multiple choice problem, assignment problem, morphological clique problem), with the author's version of morphological design approach – Hierarchical Morphological Multicriteria Design (HMMD) – providing a conceptual lens with which to elucidate the examples discussed. This approach is based on ordinal estimates of design alternatives for systems parts/components, however, the book also puts forward an original version of HMMD that is based on new interval multiset estimates for the design alternatives with special attention paid to the aggregation of modular solutions (system versions). The second part of 'Modular System Design and Evaluation' provides ten information technology case studies that enriches understanding of the design of system design, detection of system bottlenecks and system improvement, amongst others. The book is intended for researchers and scientists, students, and practitioners in many domains of information technology and engineering. The book is also designed to be used as a text for courses in system design, systems engineering and life cycle engineering at the level of undergraduate level, graduate/PhD levels, and for continuing education. The material and methods contained in this book were used over four years in Moscow Institute of Physics and Technology (State University) in the author's faculty course "System Design".

From reader reviews:

Sherry Stevens:

Book is to be different for each grade. Book for children right up until adult are different content. As you may know that book is very important for people. The book Modular System Design and Evaluation (Decision Engineering) ended up being making you to know about other know-how and of course you can take more information. It is very advantages for you. The e-book Modular System Design and Evaluation (Decision Engineering) is not only giving you far more new information but also being your friend when you sense bored. You can spend your spend time to read your reserve. Try to make relationship using the book Modular System Design and Evaluation (Decision Engineering). You never truly feel lose out for everything if you read some books.

Bobby Phillips:

This Modular System Design and Evaluation (Decision Engineering) are reliable for you who want to be a successful person, why. The key reason why of this Modular System Design and Evaluation (Decision Engineering) can be one of many great books you must have will be giving you more than just simple reading through food but feed an individual with information that perhaps will shock your before knowledge. This book will be handy, you can bring it almost everywhere and whenever your conditions at e-book and printed versions. Beside that this Modular System Design and Evaluation (Decision Engineering) giving you an enormous of experience including rich vocabulary, giving you test of critical thinking that could it useful in your day exercise. So , let's have it and luxuriate in reading.

Joshua Castillo:

Typically the book Modular System Design and Evaluation (Decision Engineering) has a lot info on it. So when you check out this book you can get a lot of advantage. The book was compiled by the very famous author. Tom makes some research previous to write this book. This kind of book very easy to read you can get the point easily after looking over this book.

Hubert Macarthur:

Do you have something that you prefer such as book? The publication lovers usually prefer to select book like comic, short story and the biggest one is novel. Now, why not attempting Modular System Design and Evaluation (Decision Engineering) that give your satisfaction preference will be satisfied simply by reading this book. Reading addiction all over the world can be said as the opportunity for people to know world far better then how they react towards the world. It can't be explained constantly that reading behavior only for the geeky person but for all of you who wants to be success person. So , for all you who want to start looking at as your good habit, you can pick Modular System Design and Evaluation (Decision Engineering) become your own personal starter.
