Statistical Inference for Discrete Time Stochastic Processes (SpringerBriefs in Statistics) M. B. Rajarshi This work is an overview of statistical inference in stationary, discrete time stochastic processes. Results in the last fifteen years, particularly on non-Gaussian sequences and semi-parametric and non-parametric analysis have been reviewed. The first chapter gives a background of results on martingales and strong mixing sequences, which enable us to generate various classes of CAN estimators in the case of dependent observations. Topics discussed include inference in Markov chains and extension of Markov chains such as Raftery's Mixture Transition Density model and Hidden Markov chains and extensions of ARMA models with a Binomial, Poisson, Geometric, Exponential, Gamma, Weibull, Lognormal, Inverse Gaussian and Cauchy as stationary distributions. It further discusses applications of semi-parametric methods of estimation such as conditional least squares and estimating functions in stochastic models. Construction of confidence intervals based on estimating functions is discussed in some detail. Kernel based estimation of joint density and conditional expectation are also discussed. Bootstrap and other resampling procedures for dependent sequences such as Markov chains, Markov sequences, linear auto-regressive moving average sequences, block based bootstrap for stationary sequences and other block based procedures are also discussed in some detail. This work can be useful for researchers interested in knowing developments in inference in discrete time stochastic processes. It can be used as a material for advanced level research students.

From reader reviews:

Clarence Riley:

What do you concerning book? It is not important to you? Or just adding material if you want something to explain what the ones you have problem? How about your time? Or are you busy particular person? If you don't have spare time to try and do others business, it is give you a sense of feeling bored faster. And you have spare time? What did you do? All people has many questions above. They must answer that question because just their can do which. It said that about publication. Book is familiar in each person. Yes, it is correct. Because start from on pre-school until university need this specific Statistical Inference for Discrete Time Stochastic Processes (SpringerBriefs in Statistics) to read.

John McCord:

As people who live in the modest era should be revise about what going on or details even knowledge to make them keep up with the era that is certainly always change and make progress. Some of you maybe will update themselves by studying books. It is a good choice to suit your needs but the problems coming to you is you don't know which you should start with. This Statistical Inference for Discrete Time Stochastic Processes (SpringerBriefs in Statistics) is our recommendation to cause you to keep up with the world. Why, as this book serves what you want and want in this era.

Joseph Wood:

The book untitled Statistical Inference for Discrete Time Stochastic Processes (SpringerBriefs in Statistics) contain a lot of information on the item. The writer explains the girl idea with easy means. The language is very straightforward all the people, so do not worry, you can easy to read it. The book was published by famous author. The author gives you in the new age of literary works. It is easy to read this book because you can please read on your smart phone, or device, so you can read the book throughout anywhere and anytime. If you want to buy the e-book, you can start their official web-site and also order it. Have a nice learn.

Victor Loy:

As we know that book is important thing to add our knowledge for everything. By a reserve we can know everything we really wish for. A book is a group of written, printed, illustrated as well as blank sheet. Every year has been exactly added. This book Statistical Inference for Discrete Time Stochastic Processes (SpringerBriefs in Statistics) was filled regarding science. Spend your spare time to add your knowledge about your research competence. Some people has diverse feel when they reading the book. If you know how big good thing about a book, you can feel enjoy to read a book. In the modern era like right now, many ways to get book that you wanted.
