Superconductivity in Graphene and Carbon Nanotubes: Proximity effect and nonlocal transport (Springer Theses) Pablo Buset Atienza

The unique electronic band structure of graphene gives rise to remarkable properties when in contact with a superconducting electrode. In this thesis two main aspects of these junctions are analyzed: the induced superconducting proximity effect and the non-local transport properties in multi-terminal devices. For this purpose specific models are developed and studied using Green function techniques, which allow us to take into account the detailed microscopic structure of the graphene-superconductor interface. It is shown that these junctions are characterized by the appearance of bound states at subgap energies which are localized at the interface region. Furthermore it is shown that graphene-superconductor-graphene junctions can be used to favor the splitting of Cooper pairs for the generation of non-locally entangled electron pairs. Finally, using similar techniques the thesis analyzes the transport properties of carbon nanotube devices coupled with superconducting electrodes and in graphene superlattices.

From reader reviews:

Doris Edwards:

Book is usually written, printed, or descriptive for everything. You can understand everything you want by a book. Book has a different type. As you may know that book is important issue to bring us around the world. Alongside that you can your reading skill was fluently. A guide Superconductivity in Graphene and Carbon Nanotubes: Proximity effect and nonlocal transport (Springer Theses) will make you to be smarter. You can feel more confidence if you can know about almost everything. But some of you think which open or reading the book make you bored. It's not make you fun. Why they may be thought like that? Have you trying to find best book or suitable book with you?

Timothy Grill:

This Superconductivity in Graphene and Carbon Nanotubes: Proximity effect and nonlocal transport (Springer Theses) are reliable for you who want to be a successful person, why. The reason of this Superconductivity in Graphene and Carbon Nanotubes: Proximity effect and nonlocal transport (Springer Theses) can be one of several great books you must have is giving you more than just simple reading food but feed you actually with information that might be will shock your earlier knowledge. This book is handy, you can bring it all over the place and whenever your conditions throughout the e-book and printed kinds. Beside that this Superconductivity in Graphene and Carbon Nanotubes: Proximity effect and nonlocal transport (Springer Theses) forcing you to have an enormous of experience including rich vocabulary, giving you trial run of critical thinking that we realize it useful in your day exercise. So , let's have it and luxuriate in reading.

Ellen McNulty:

The book Superconductivity in Graphene and Carbon Nanotubes: Proximity effect and nonlocal transport (Springer Theses) will bring that you the new experience of reading some sort of book. The author style to elucidate the idea is very unique. In case you try to find new book you just read, this book very ideal to you. The book Superconductivity in Graphene and Carbon Nanotubes: Proximity effect and nonlocal transport (Springer Theses) is much recommended to you to study. You can also get the e-book from the official web site, so you can quicker to read the book.

Jennifer David:

Reading a publication tends to be new life style within this era globalization. With reading through you can get a lot of information that can give you benefit in your life. Using book everyone in this world may share their idea. Ebooks can also inspire a lot of people. Plenty of author can inspire their particular reader with their story or perhaps their experience. Not only the story that share in the ebooks. But also they write about the information about something that you need illustration. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book which exist now. The authors nowadays always try to

improve their talent in writing, they also doing some investigation before they write for their book. One of them is this Superconductivity in Graphene and Carbon Nanotubes: Proximity effect and nonlocal transport (Springer Theses).
