Statistics for High-Dimensional Data: Methods, Theory and Applications (Springer Series in Statistics)

Peter Bühlmann, Sara van de Geer

Modern statistics deals with large and complex data sets, and consequently with models containing a large number of parameters. This book presents a detailed account of recently developed approaches, including the Lasso and versions of it for various models, boosting methods, undirected graphical modeling, and procedures controlling false positive selections.

A special characteristic of the book is that it contains comprehensive mathematical theory on high-dimensional statistics combined with methodology, algorithms and illustrations with real data examples. This in-depth approach highlights the methods' great potential and practical applicability in a variety of settings.

As such, it is a valuable resource for researchers, graduate students and experts in statistics, applied mathematics and computer science.

From reader reviews:

Jennifer Bell:

Information is provisions for folks to get better life, information nowadays can get by anyone with everywhere. The information can be a information or any news even a problem. What people must be consider while those information which is from the former life are difficult to be find than now's taking seriously which one is acceptable to believe or which one typically the resource are convinced. If you receive the unstable resource then you buy it as your main information you will see huge disadvantage for you. All of those possibilities will not happen in you if you take Statistics for High-Dimensional Data: Methods, Theory and Applications (Springer Series in Statistics) as the daily resource information.

Glenn Hancock:

Reading a book to become new life style in this season; every people loves to examine a book. When you go through a book you can get a lot of benefit. When you read textbooks, you can improve your knowledge, since book has a lot of information upon it. The information that you will get depend on what forms of book that you have read. In order to get information about your examine, you can read education books, but if you want to entertain yourself you can read a fiction books, this kind of us novel, comics, and also soon. The Statistics for High-Dimensional Data: Methods, Theory and Applications (Springer Series in Statistics) provide you with a new experience in studying a book.

Leigh Grayer:

A lot of book has printed but it takes a different approach. You can get it by online on social media. You can choose the best book for you, science, amusing, novel, or whatever by searching from it. It is identified as of book Statistics for High-Dimensional Data: Methods, Theory and Applications (Springer Series in Statistics). You can include your knowledge by it. Without making the printed book, it could possibly add your knowledge and make a person happier to read. It is most crucial that, you must aware about book. It can bring you from one destination to other place.

Steven Hackett:

What is your hobby? Have you heard which question when you got learners? We believe that that question was given by teacher on their students. Many kinds of hobby, Everyone has different hobby. And you know that little person similar to reading or as reading through become their hobby. You have to know that reading is very important along with book as to be the factor. Book is important thing to incorporate you knowledge, except your own personal teacher or lecturer. You get good news or update with regards to something by book. Different categories of books that can you choose to adopt be your object. One of them are these claims Statistics for High-Dimensional Data: Methods, Theory and Applications (Springer Series in Statistics).
