Now that I have compiled these proceedings, it is a great pleasure to thank all involved. The first thanks go to the scientific community interested in hiding information or in stopping other people doing this. At the initiative of Ross Anderson in 1995, we came together for the first international meeting at IH'96 in Cambridge, and subsequently met at IH'98 in Portland. Our community now consists of about 200 people collaborating around the world - and making remarkable progress. It is our common conviction that in the long run, much more security is achieved by open discussion and public selection of mechanisms and implementation than by "security by obscurity". This is especially true for large commercial systems, and it is most probably also true within the field of information hiding. Trying to hide the design and implementation of hiding mechanisms may be particularly tempting - since hiding is an issue anyway. But as shown by the breaks of quite a few digital copy-protection systems within the last few years, "security by obscurity" may prove not to be commercially viable, at least not in civil societies. The scientific community submitted 68 papers to this conference IH'99. This was many more papers than we had expected, and they were of much higher quality than we had dared to hope for. Many thanks to all authors. To cope with this situation, the program committee, consisting of Ross Anderson (Cambridge University), David Aucsmith (Intel, Portland, OR), Jean-Paul Linnartz (Philips Research, Eindhoven), Steve Low (University of Melbourne), Ira Moskowitz (US Naval Research Laboratory), Jean-Jacques Quisquater (Université catholique de Louvain), Michael Waidner (IBM Research, Zurich), and me, decided to ask additional experts to help in the review of - pers.
